1400 Made entry inside the house and took readings. House readings were all 0.0 ppm except the fridge/freezer which had 0.1 ppm. The fridge/freezer was unplugged and moved away from the wall and the doors were left propped open.

The mixer outside the house with the deactivating aluminum phosphide had a reading of 4.5 ppm while turned off and a poly cover and a reading of >20 ppm while running and a poly cover. The drum with the food from the fridge/freezer had a reading of 2.5 ppm.

Due to incoming icy weather SWS and EPA are leaving the site until Tuesday.
